How is studying Logistics at WSB Merito University going to benefit you?

Engineer Your Global Career: International Logistics for a Connected World

Are you ready to design and manage supply chains that span the globe? Merito University in Warsaw's "International Logistics" engineering program equips you with the specialized skills to thrive in today's interconnected world. You'll learn to manage logistics in the context of global transport, implement international business strategies, and plan and supervise transport and forwarding processes. You'll also master engineering design elements related to logistics, and plan and supervise supply, warehousing, and distribution processes at the international level.

Launch Your Career in Global Logistics Management

This specialization prepares you for a range of roles, including international logistics specialist, international warehouse manager, global logistics consultant, international logistics analyst, international transport manager, customs and import/export specialist, and supply chain specialist. Core modules include Legal Responsibilities in International Logistics, Automation of Warehouse Processes, IT Systems Used in Warehouse Management, Packaging in International Logistics, Techniques and Tools for Quality Improvement Used in International Logistics, and Costs of Logistics Processes. This comprehensive program equips you with the engineering knowledge and practical skills to lead in the ever-evolving global logistics landscape

During your studies, you will **gain skills** that are necessary to manage logistics, transport and business relations in an efficient manner. You will **explore modern tendencies** and **innovative methods** of supply chain management as well as out-of-the-box ways of solutions that can be applied in the Transport-Shipping-Logistics industry.

Throughout your studies, you will **acquire knowledge** that will prepare you for the work in diverse economic sectors, such as logistics, production and transport companies as well as distribution centres. In the world that is becoming more and more globalised, where the optimisation of logistical processes is the key to success, the demand for qualified specialists in this field is constantly growing. That is why training in logistics opens up a wide range of professional opportunities, and provides stability in the job market.

Key program features

By developing the key skills of the future, our offer responds to the current challenges of the labour market. During classes, you will learn practical skills such as teamwork, career planning and interdisciplinary problem solving. You will be able to gain practical industry knowledge by participating in **semester and interdisciplinary projects**.

The **curriculum** covers both obligatory courses taken by all students and specialisation courses which are individually chosen for each specialisation. Among obligatory courses, you can find for example: Information technology, Supply logistics, Production and service management, Logistic infrastructure, Logistics strategies, IT systems in logistics and Controlling in logistics.

Selected specialisation courses:

- Product lifecycle management and green logistics;
- Logistics of distribution;
- Warehouse management;
- Economic analysis of a logistics company;
- Transport economics;
- Statistics with elements of operational research;
- Packaging in logistics systems;
- Market of logistics services;
- Urban logistics.
